Apples are produced across Canada on over 17,000 hectares of land. There are enough apples produced in Canada for every Canadian to consume 10 kg per year.

The first Canadian apple tree was planted in Nova Scotia’s Annapolis Valley in the 1600s. Canada exports over $37M worth of apples each year.

Canadian apple research achievements:
- Created apple varieties like the Spartan and the Salish.
- Developed technologies to extend the shelf life and freshness of apples.
- Developed a tool that lets apple growers test the ripeness of apples on the tree.

Created apple varieties like the Spartan and the Salish.

Apples are produced for:

- Direct consumption
- Or processed for:
  - Cider
  - Apple wines
  - Hard ciders
  - Dried apples
  - Baked goods
  - Apple butter
